

Addition and Subtraction (Part 3)

Addition can be done in any order - subtraction can't!

Numbers can be added in any order and the answer will stay the same.

Example:

The total is the same! Use this to help you answer the questions below.

1. $4 + 3 = 7$

$3 + 4 = \square$

2. $9 + 2 = 11$

$2 + 9 = \square$

3. $6 + 4 + 7 = 17$

$4 + 7 + 6 = \square$

4. $19 + 10 = 29$

$10 + 19 = \square$

5. $18 + 15 = 33$

$15 + 18 = \square$

6. $2 + 7 = 9$

$7 + \square = 9$

7. $7 + 3 + 6 = 16$

$3 + \square + 6 = 16$

8. $4 + 5 + 6 + 5 = 20$

$6 + \square + \square + \square = 20$

9. $23 + 20 = 43$

$20 + \square = \square$

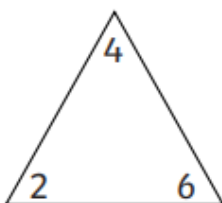

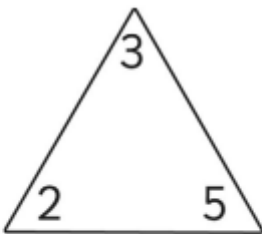

10. $27 + 24 = 51$

$24 + \square = \square$

Number families

Can you complete the family of calculations for each triangle? The first one has been done for you to show you what to do.

$$\begin{array}{r} 2 + 4 = 6 \\ 4 + 2 = 6 \\ 6 - 2 = 4 \\ 6 - 4 = 2 \end{array}$$

$$\begin{array}{r} \square + \square = \square \\ \square + \square = \square \\ \square - \square = \square \\ \square - \square = \square \end{array}$$

$$\begin{array}{r} \square + \square = \square \\ \square + \square = \square \\ \square - \square = \square \\ \square - \square = \square \end{array}$$
$$\begin{array}{r} \square + \square = \square \\ \square + \square = \square \\ \square - \square = \square \\ \square - \square = \square \end{array}$$

$$\square + \square = \square$$

$$\square + \square = \square$$

$$\square - \square = \square$$

$$\square - \square = \square$$

$$\square + \square = \square$$

$$\square + \square = \square$$

$$\square - \square = \square$$

$$\square - \square = \square$$

$$\square + \square = \square$$

$$\square + \square = \square$$

$$\square - \square = \square$$

$$\square - \square = \square$$

$$\square + \square = \square$$

$$\square + \square = \square$$

$$\square - \square = \square$$

$$\square - \square = \square$$
